

SEISMIC - CAMKIT

Brand	Profile Equipment
Code	SG-CK
NSN Number	NA
In Use With	-Disclosed-
Protection Level	Range, 7 m
Min. Order Quantity	1
Delivery Time	2 weeks,

Featuring exceptionally rugged military-grade design for various tactical and surveillance applications, our SG Cam (UGS) covert surveillance kit is small, lightweight, and battery powered. With a proven battle-tested track record of over four years, our kit perfectly merges invisible seismic detection technology with aerial camera support boasting numerous success stories in prevention and protection against illegal dumping, hunting, border intrusion, to name just a few.

At the heart of the kit is a SensoGuard wireless seismic sensor with adaptive algorithms to constantly learn and adapt to environmental noises and search for intrusion patterns. Each buried sensor covers an area of at least 50 sq m (540 sq ft), detecting and classifying both foot and vehicle intrusions.

Sensitivity for each type of intrusion can be conveniently adjusted for each sensor, while the associated concealed camera can be placed up to 50 meters away from the buried sensor. SG Cam (UGS) covert surveillance kit makes scaling up and customization easy. Each sensor can trigger one or more cameras, or conversely, a single camera can be triggered by several sensors.

Profile Equipment

Our own Top Quality products, designed for military and law enforcement. We can Develop and Design products in Textiel, Ballistics and a wide range of plastics, metals and composites. With rapid prototyping, unique and serial production we can help out on the most difficult products and engineering tasks.
