

SEISMIC - KIT

Brand	Profile Equipment
Code	SG-KT
In Use With	-disclosed-
Protection Level	7 m range
Min. Order Quantity	1
Delivery Time	2 days

Our standalone buried seismic detectors offer reliable, long-lasting and invisible protection – with no maintenance required. Based on the same sensitive seismic technology used for earthquake detection, the system recognizes threats whenever vibrations are sensed in their vicinity. Our rugged underground detectors are manufactured in compliance to strictest military standards, rendering them completely functional year-round, even under extreme weather conditions. The system is able to uniquely recognize a wide range of threats above and below ground, including footsteps, moving vehicles, digging activities, among others. It is easily integrated into any existing security system – offering an extra layer of reliable protection – or operates as a standalone security system in guarded or unguarded sites. Equipped with adaptive algorithms optimized to minimize false alarms rate (FAR) and maximize probability of detection (PD), the system acts as a worry-free early detection system to secure and protect your assets and property.

Profile Equipment

Our own Top Quality products, designed for military and law enforcement. We can Develop and Design products in Textiel, Ballistics and a wide range of plastics, metals and composites. With rapid prototyping, unique and serial production we can help out on the most difficult products and engineering tasks.
